Deployed on BNB Smart Chain mainnet

1. Introduction

Quazenthor (QWBQ) is a fixed-supply BEP-20 token deployed on BNB Smart Chain mainnet as a public technical reference implementation.

The token enables real blockchain interaction with standard BEP-20 functions, including transfers, approvals, allowance validation, and event observation.

Educational distribution is performed manually and is fully transparent on-chain. The contract is immutable and contains no minting, burning, taxation, or upgradeability mechanisms.

This whitepaper provides detailed information on the project's structure, purpose, and operations for educational reference.

Download PDF Version

2. Project Purpose

Quazenthor was created to provide a minimal and transparent BEP-20 reference contract deployed on BNB Smart Chain mainnet for real educational interaction.

The purpose is to allow practical observation of how a fixed-supply BEP-20 contract behaves in a live blockchain environment.

It exists as a technical reference implementation — not as a financial or speculative product.

3. Who Benefits From It

Quazenthor is intended for:

- Students learning smart contract fundamentals
- Developers studying BEP-20 token mechanics
- Blockchain researchers analyzing on-chain behavior
- Technical reviewers examining immutable contract design

It is not designed for traders or speculative investors.

4. How It Is Used

Users interact with Quazenthor directly on mainnet by:

- Sending token transfers between wallets
- Testing approval and allowance mechanisms
- Monitoring Transfer and Approval event logs
- Observing holder distribution changes
- Verifying the permanently fixed total supply

5. Educational Role

The educational role of Quazenthor is to serve as a live reference model of a minimal BEP-20 contract on mainnet.

Unlike simulated environments, Quazenthor allows learners to observe:

- How supply remains constant
- How allowances are granted and reduced
- How events are emitted and recorded
- How holder distribution evolves
- How gas behaves in real network conditions

6. Token Distribution Model

QWBQ tokens are distributed manually upon request for educational interaction.

There is:

- No ICO
- No presale
- No public sale
- No liquidity pool
- No exchange listing

Distribution is gradual and visible on-chain.

7. Supply Structure

Total supply is permanently fixed at 5,000,000,000,000 QWBQ.

No minting exists.

No burning exists.

No taxation exists.

No upgradeability exists.

This ensures permanent stability of the reference contract.

8. Contract Details

Contract Address:

[0x013f5f2F7F5b027012415A783ac2ed69EF936aE8](0x013f5f2F7F5b027012415A783ac2ed69EF936aE8)

Verified on: January 31, 2026

The contract implements standard BEP-20 functions without any extensions or custom logic.

9. Contributors

The project is initiated and coordinated by the founder: toora dokht.

Independent contributors assist in documentation, technical review, and website maintenance.

Contract ownership remains under the deployer address to preserve reference stability.

No contributor has control over contract logic or token supply.

10. On-Chain Transparency

All token balances, transfers, and events are publicly visible on BNB Smart Chain.

Gradual manual distribution to independent wallets is performed for educational purposes only.

---

11. Risk Disclosure

Interacting with blockchain tokens involves risks such as smart contract behavior, network conditions, user errors, and potential permanent loss of funds. This project assumes no responsibility or liability for any actions, losses, or decisions.

The token is not a security, financial instrument, or investment product. Nothing constitutes financial, investment, or legal advice.

---

12. Official Channels

These are the only official channels for Quazenthor. Beware of impersonators.

All official resources are listed on the Network Links page.
